Welcome to the Spring edition of the JACE SUPPLIES newsletter!

A BUSY YEAR AHEAD FOR JACE SUPPLIES!

It's all systems go for the JACE SUPPLIES team as work gets underway on a variety of projects and installations for 2019.

Work has commenced on two new GEA parlours, one in Staffordshire and the other in Cheshire.

Another second hand parlour is also being fitted in

Monyash, Derbyshire. The new parlours are replacing one original westfalia 20:20 parlour with jars and the other a 35 year old 12:24 original Alfa parlour.

Pictured opposite right, the farm in Staffordshire will be milking 250 cows through a new 24:48 swing over

with P21 milk controls, the Apollo milking system, segregation gate, VOD (vacuum on demand),

Compass Plus plant washer and cow scout with heat detection.

Pictured left, the farm in Cheshire will be milking 230 cows through a 32:32 double up with the Apollo milking system, Cowscout with rumination monitoring, VOD, compass plus plant washer and segregation gate. The parlour will have stainless steel cabinets that will conceal all the electronics and enable easy cleaning.

Moving into Derbyshire and this time going back into milk production, work has commenced on a 14:28 swing over. With new stall work and new Dematron

milk meters, there will be a second hand milk pump assembly and refurbished second hand feeders and vacuum pump. With a deadline of four weeks the cows will be arriving soon!!

NEW GREEN FIELD SITE...

Heading back to Cheshire and to a new green field site, JACE Supplies will be installing a 60 point Milfos rotary parlour with GEA equipment.

Work is also to commence on a parlour extension in Staffordshire. A 20:20 will be extended to create a 25:50 swing over.

MOBILE BALE UPDATE...

Two of the mobile milking bales are currently in wales on another green field site. Over the next four months a new GEA parlour is being installed.

As the cows calve down, the new site will milk a total of 500 cows!

4TH BALE ...

Work on a fourth bale is due to commence, however, this time the bale will be permanently sited on a greenfield site in Wales. The fixed bale that is to be purchased will be a 12:24, with batch feeding (fixed rations), Dematron milk meters and it will also have its own self contained dairy inside the bale. The unit will milk 80 cows and the site will be processing their own dairy produce.

MILFOS...

Currently to date there are seventeen Milfos rotary parlours to be installed in the UK this year.
